**MEDICIÓN DE LA TEMPERATURA DEL AGUA DE  
REFRIGERACIÓN DE LAS CENTRALES  
PUERTO NUEVO Y NUEVO PUERTO**

**RESUMEN**

Se determinó la temperatura del agua para refrigeración en las obras de toma, de descarga y condensadores de las centrales Puerto Nuevo y Nuevo Puerto, las cuales son referidas a la temperatura del Río de la Plata fuera del ámbito del puerto de la Ciudad de Buenos Aires. Período de medición agosto de 2002.

Descriptores temáticos: Sistema de refrigeración centrales térmicas, medición de temperaturas.  
Descriptores geográficos: Río de la Plata, Puerto de la Ciudad de Buenos Aires.  
Descriptores Institucionales: Central Puerto S.A.

PLANILLAS Y GRAFICOS CENTRAL NUEVO PUERTO

## 1.- INTRODUCCION

Central Puerto S.A. solicitó al INA, para que a través de su Laboratorio de Hidráulica, extendiera por un período de tres meses (a partir del 26 de junio al 24 de septiembre de 2002), la medición de la temperatura del agua empleada para refrigeración, en las obras de toma, obras de descarga y condensadores de las centrales termoeléctricas Puerto Nuevo y Nuevo Puerto, ubicadas en el interior del puerto de la Ciudad de Buenos Aires.

La temperatura del agua del Río de la Plata, obtenida mediante una estación de medición ubicada fuera del ámbito del puerto, es utilizada para referir la variación de la temperatura en las obras de toma de las centrales, causada por la variación estacional de la temperatura del río. Además, se representa la energía bruta generada por las centrales, para correlacionar la misma con la variación de las temperaturas en las obras de descarga.

En los informes LHA-01-176-99 al LHA-10-176-99, se presentaron los datos del primer año de mediciones, desde el 30 de septiembre de 1998 al 28 de septiembre de 1999. En los informes LHA-01-184-99 al LHA-12-184-00, se presentaron los datos del segundo año de mediciones, desde el 29 de septiembre de 1999 al 26 de septiembre de 2000: En los informes LHA-01-195-01 al LHA-06-195-01, se representan los datos del periodo 27 de septiembre de 2000 al 27 de marzo de 2001. En los informes LH-01-197-01 al LH-12-197-01 se representaron los datos del periodo 20 de junio de 2001 al 25 de junio de 2002.

El presente convenio representará las mediciones de un periodo de tres meses, con el fin de cubrir la estación invernal con el nuevo escenario de generación. Para efectuar la comparación directa de las nuevas mediciones con las de los periodos precedentes, se efectuaran las mismas en idénticas condiciones y se empleará el mismo procesamiento de datos, descriptos oportunamente en los informes precedentes.

El informe LH-01-217-02, cubre el período de mediciones desde el 26/06 al 30/07/02, el presente informe LH-02-217-02 cubre el período de mediciones desde el 31/07 al 27/08/02.

Para facilitar la rápida interpretación de las mediciones presentadas en este informe, se repiten las Figuras N° 1 y N° 2, donde se puede observar la ubicación de las **estaciones de medición** y la codificación empleada para identificar la totalidad de las mismas.

Temperatura del Río en el Muelle del Club de Pescadores, sonda inferior	Río <sub>(I)</sub>
Temperatura del Río en el Muelle del Club de Pescadores, sonda superior	Río <sub>(S)</sub>

## 2.- PRESENTACION DE LAS MEDICIONES

Los registros del segundo período mensual, fueron obtenidos semanalmente, por lo cual se presentan Planillas con datos diarios y gráficos cada siete días de medición. Se agruparon las estaciones de medición correspondientes a cada una de las Centrales (Puerto Nuevo y Nuevo Puerto) y las mismas están referidas a la temperatura del Río de La Plata y a la energía bruta generada en cada central.

Los gráficos representan la evolución de las temperaturas cada 7 días con datos cada 2 horas, período suficiente para observar la variación de las mismas.

### 2.1.- OBSERVACIONES

Se detallan cronológicamente los puntos singulares de cada una de las Planillas y/o Gráficos y se realiza una breve descripción de los mismos.

#### 2.1.1.- CENTRAL PUERTO NUEVO

- Se continuaron con las tareas de mantenimiento hasta aproximadamente las 15:00 hs. del día 31/07 en el condensador de la unidad 9, estación de medición **CPN<sub>(A)</sub>** (Planillas N° 36) (Gráfico N° 6).
- Entre las 00:00 hs y las 04:00 hs del día 09/08 la sonda **Río<sub>(S)</sub>** queda fuera del agua por una bajante importante del río (Planillas N° 45) (Gráfico N° 7).

#### 2.1.2.- CENTRAL NUEVO PUERTO

**Nota:** No se repetirán las aclaraciones efectuadas en las planillas de la Central Puerto Nuevo para la estación de medición ubicada en el Muelle del Club de Pescadores, sondas **Río<sub>(I)</sub>** y **Río<sub>(S)</sub>**, en las planillas correspondientes a la Central Nuevo Puerto, pues son exactamente las mismas mediciones.

A partir del informe LHA-05-184-00, se incluyó en las planillas de la Central Nuevo Puerto la columna **En(U10 a 12)** que representa la suma de la **energía neta** (expresada en MWh) en el Nuevo Ciclo Combinado; la columna **En(U5 y 6)** representa la suma de la **energía bruta** generada en las Unidades 5 y 6 (expresada en MWh).

Sin novedades
